

Secure File

Maximize the security of your files in an open office plan.

Secure File provides superior security for confidential documents and other sensitive media. The system's unique ganging ability allows for easy access to secured files regardless of whether adjacent files are locked or unlocked.

Secure Your Files

Standard security is provided by a lock mechanism that engages on both sides of the cabinet. Added security is provided by two 'piano-style' hinges welded on both sides of the case. These hinges cover the drawers and are held in place by a sliding security bar with provision for a padlock. It's also possible to gang multiple files and still be able to access more than one file at the same time.

Unlimited Options

Secure File is available in the Storage Centers, 9900 Series and Arcus Series lateral files in 30", 36" and 42" widths and eight heights. Additional height options are also available upon request. Choose from thousands of colors. Office Specialty offers the most comprehensive and flexible range of filing and personal storage available. All products are backed by a limited lifetime warranty and excellent support services.

Storage Centers Secure File shown. Padlock not included. Sliding security bar is finished in the same color as the cabinet and hinges for a consistent aesthetic.
