Eames® Molded Plastic Chairs

THE ART OF THE ORGANIC

New materials, especially those that held promise for doing more with less, fascinated the Eameses throughout their careers. Plastic was no exception. They saw in it the chance to form organic seat shells that conform to the body's shape. The Eameses adapted manufacturing techniques developed during World War II to mass-produce this design in side and armchair versions. As they typically did, the Eameses required that materials be expressed honestly and unselfconsciously so these were the first one-piece plastic chairs offered without upholstery or covering. Their enduring design and quality construction make them durable performers in many environments.

Charles and Ray Eames

MANY COMBINATIONS

A comfortable seat combines with a variety of bases, including wire, four-legged, and rocker for armchairs and wire and four-legged for side chairs. Side chairs with four-legged base stack up to 14 high.

DURABLE COLORS

Colors permeate the polypropylene material so they remain vibrant even after years of hard use.

FRIENDLY TO THE EARTH

Innovations in technology and materials result in fully authentic seats shells produced of ecologically friendly, recyclable polypropylene.
