Eames® Molded Plywood Chairs

DESIGN BUILT ON INNOVATION

Discovery often takes interesting turns. Consider the shapes Charles and Ray Eames made plywood take. Experimenting in the 1940s with thin sheets of wood veneer formed under heat and pressure, they put their genius to work for the war effort making splints, stretchers, and glider shells. After the war, they adapted the technology to furniture making. Sculpting a seat and back to fit the contours of the human body, they designed a truly comfortable chair that's suitable for businesses and homes. It's an achievement others have noticed—*Time* magazine named it the Best Design of the 20th Century.

Charles and Ray Eames

ORIGINAL SHAPE THAT SITS WELL

In their search for a better way, Charles and Ray Eames developed an innovative technique for molding plywood. The process allowed them to bend wood furniture in new directions and give hard materials a soft appearance. This focus on technology wasn't at the expense of the details:

Choice—both the dining and lounge models have chrome-plated steel or wood legs; the outer ply is cherry, walnut, natural ash, stained ash, or colorfully stained birch; chrome-plated steel base is also available.

Comfort—the contours of the molded plywood fit the body's shape.

Durability—the plywood has five plies, with hardwood inner plies; natural rubber shock mounts absorb movement.
