

Eames® Storage and Desk Units

DESIGN AHEAD OF ITS TIME

Introduced in 1950, these units demonstrate the knack Charles and Ray Eames had for using industrial production techniques to extend the boundaries of design and create a whole new look. A result of work they had done for a 1949 exhibition at the Detroit Institute of Arts, these pieces reveal the “machine aesthetic” and Japanese influences important to the Eameses at the time. Long before “modularity” and “high tech” entered the language, Charles and Ray combined standardized parts in many ways to create practical furnishings that suit a variety of uses at home and the office.

Charles and Ray Eames

STEEL FOR STRENGTH

Uprights, cross supports, and perforated panels are zinc-coated steel for strength and stability. Nylon foot glides are easy on floors.

WOOD AND PAINT FOR FUN

Dimpled plywood on cabinet fronts and plywood drawer fronts and shelves reinforce the furniture’s cubist look. Painted hardboard case sides and back panels add a dash of color.
