Eames® Wire Chairs

BENT ON DESIGN

In 1951, Charles and Ray Eames met the challenge of making a reasonably priced, quality chair that was light yet strong. To achieve strength requirements and an organic shape, they made the rim of the chair out of light-gauge wire and doubled it for strength and stability. This advance won them the first American mechanical patent for design. They molded the seat of cross-woven wires and positioned it on a bent-wire, welded base that reminded some reviewers of the Eiffel Tower. The resulting airy silhouette adds interest—and functional seating—to residences and workplaces alike.

Charles and Ray Eames

BEAUTIFUL LEATHER

Chair seats are available in a crisscross, two-piece leather version known as the bikini pad or with a leather seat pad, in addition to the wire-only model.

SMOOTH GLIDES

Standard glides feature a durable plastic bottom. Glides are also available with felt bottoms to protect bare floors. Both styles tilt slightly to help with leveling.

Depth: 21 $\frac{1}{4}$ "

Width: 19"

Height: 32 $\frac{3}{4}$ "

Wire Chair (DKR.o)

Wire Chair (DKR.5)
