

 **Herman Miller**

**Passage<sup>®</sup> Desking System**

### AN EVERYWHERE PERFORMER

Combining individual strengths can yield a powerful result. With the Passage desking system, Herman Miller builds systems capabilities into freestanding furniture to create one versatile performer. Passage workstations are composed of preassembled, freestanding modular units that are easy to specify, order, and install. Passage also works like a system, it supports technology with power and cable management, and it supports people with the ergonomic features of systems furniture. By blending the advantages of freestanding and systems furniture, Passage works equally well in enclosed offices and in open spaces, for individuals and for teams, while keeping a consistent look throughout.

### MOBILE AND ADJUSTABLE

Desk modules, including peninsulas, can be ordered with a work surface height-adjustment range of 26 to 31 inches at 1-inch height increments. The legs on oval, concave, and D-shaped mobile tables are adjustable from 26 to 31 inches. Work surfaces on Passage desk modules come in a number of curved shapes with rounded edges. Put together, the modules form distinctive workstation designs. Surfaces have either a laminate top and vinyl edge or a veneer top and wood composite edge.

### MODULAR FLEXIBILITY

Passage true modular design means no dimensional gain, making space planning simple. A workstation starts with an arrangement of fully assembled desk modules, which are composed of work surfaces, legs, stanchions, energy and cable management, and back panels. The three-in-one back panel easily converts to full, partial, or open positions without compromising cable management and allows for various levels of privacy, ventilation, and access to wall outlets. Screens, storage, and other components are added to suit the worker, task, and application. Since workstations don't rely on panels, walls, or other workstations for support, rearranging them doesn't disrupt people working nearby. And the flexibility of Passage includes its appearance thanks to an extensive materials offering that includes paints, veneers, and laminates.

### PRIVACY UNDER CONTROL

Screens attach above work surfaces to build in the right level of privacy. Each desk unit can have its own system of screens that allows privacy to be easily changed. The screens stack to 67 inches with combinations of fabric, marker board, ribbed, and clear glass or arc screens to strike a balance between light and privacy. They can also be added or removed without affecting any other part of the workstation. Full-height screens can be linked together to create a conference area or increase enclosure in a workstation. Full-height, arc, and rectangular fabric screens are all tackable on both the front and back sides.

### STORAGE FROM THE TOP DOWN

Flipper door units and shelves make use of vertical space in small-footprint workstations. Easy-open, soft-closing doors are available in veneer, fabric, and painted metal. A tool rail attaches to the work surface so people can personalize their spaces and control clutter. Meridian® filing and storage solutions allow customization of the workspace to store files, binders, coats—or anything else.

### HIGH CAPACITY POWER AND DATA

The horizontal raceways in desk modules manage energy and cables below the work surface and are easy to access from the front or back. The top channel, located just below the work surface, routes cords and cables to provide more usable work surface space.

The desk module's primary cable channel is a continuous, grounded metal barrier that holds 123 Category 5e or 96 Category 6 cables at a 60 percent fill rate. The bottom channel holds the power harness. Powered desk modules come with the power harness already installed. Back panels, available in three heights, can be easily removed to access utility raceways from the aisle side.

The 4-circuit, 8-wire system supports heavy computer use and handles multiple specialized circuits for sensitive equipment. Power entering a building from a single point can feed multiple workstations.

Most desk module styles have two duplex receptacles under the work surface. Corner and extended corner desk modules have four duplex receptacles. Receptacles are also available at work surface height. An electrical distributor and a voice/data outlet can be attached to the work surface for easy power and data access.

### 12-YEAR, 3-SHIFT WARRANTY

Like all Herman Miller products, the Passage desking system is durable for long-term performance and value. As a statement of our confidence in its quality, we cover Passage with the Herman Miller Warranty—a straightforward promise that we stand behind that quality 100 percent. The 12-year, 3-shift warranty covers all standard elements and includes labor on all warranty work.

### EASY OPTIONS<sup>SM</sup> CAPABILITY

Our versatile, flexible products give people real choices. If they need something extra, we can do that, too, from modifying existing products to developing new ones. For more information on our Easy Options capability, please visit [www.HermanMiller.com/easyoptions](http://www.HermanMiller.com/easyoptions).
